EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with George Brieger on 4/13/2005.

Claim 1 of the application has been amended as follows:

1. A program creation method comprising:

generating a first encoded code module and a second encoded code module ~~modules~~ by encrypting corresponding processing code modules; and
creating a first program configured to decrypt the second encoded code module and a second program configured to decrypt the first encoded code module during execution,

wherein each of said first and second programs waiting for decryption waits for a pre-calculated period of time, and after the pre-calculated period of time has elapsed, executes a next processing regardless of whether or not the decryption is completed.

Art Unit: 2132

2. The following is an examiner's statement of reasons for allowance. The present invention is directed to a method for generating obfuscated code modules and executing the obfuscated code modules using separate programs. More specifically, independent claims 1, 10, 19 and 21 identify the uniquely distinct feature: each of the programs waits for the other/another program to deobfuscate a code module for a pre-determined period of time and then executes the code module regardless of whether or not the code module is completely deobfuscated. The closest prior art, Aucsmith et al. (5,892,899), discloses a method for generating obfuscated code modules and executing the obfuscated code modules using separate programs. Another prior art, Nardone et al. (6,205,550) teaches stopping the execution of a program module if the elapsed execution time has exceeded a threshold. However, Aucsmith and Nardone do not teach or suggest that a program waits for the other/another program to deobfuscate a code module for a pre-determined period of time and then executes the code module regardless of whether or not the code module is completely deobfuscated. The prior art, taken either singly or in combination, fails to anticipate or fairly suggest the limitations of applicant's independent claim, in such a manner that a rejection under 35 U.S.C 102 or 103 would be proper. The claimed invention is therefore considered to be in condition for allowance as being novel and nonobvious over prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
